

# GPS Satellite Surveying, 2<sup>nd</sup> Edition

Alfred Leick

Department of Surveying Engineering, University of Maine

John Wiley & Sons, Inc.

1995

(Navtech order #1028)

## Table of Contents

Preface .....	xiii
Frequently Used Abbreviation .....	xvii
Chapter 1: Introduction .....	1
1.1 The outcome of GPS positioning .....	4
1.2 A performance review .....	5
1.3 Some geodetic considerations .....	10
Chapter 2: Elements of Satellite Surveying .....	16
2.1 Geocentric coordinate systems and their motions .....	16
2.1.1 Precession and nutation .....	17
2.1.2 The conventional terrestrial reference system .....	22
2.2 Time systems .....	26
2.2.1 Time in orders of magnitude .....	26
2.2.2 Astronomic time scales .....	29
2.2.3 Atomic time .....	33
2.2.3.1 Need for coordination .....	34
2.2.3.2 Link to earth rotation .....	35
2.2.4 Time and earth orientation services .....	37
2.3 Satellite orbital motion .....	38
2.3.1 Kepler elements .....	38
2.3.2 Normal orbital theory .....	41
2.3.3 Satellite visibility and topocentric motion .....	49
2.3.4 Disturbed satellite motion .....	53
2.3.4.1 Gravitational field of the earth .....	54
2.3.4.2 Acceleration due to the sun and the moon .....	55
2.3.4.3 Solar radiation pressure .....	56
Chapter 3: The Global Positioning System .....	58
3.1 Space segment .....	60
3.1.1 GPS satellites .....	60
3.1.2 Orbital configuration .....	62
3.1.3 Satellite transmissions .....	65
3.1.3.1 Overview .....	66
3.1.3.2 Space vehicle and GPS time systems .....	67
3.1.3.3 GPS signal structure .....	68
3.1.3.4 The navigation message .....	72
3.2 Control segment and other support .....	77
3.3 Receivers .....	78
3.3.1 Some fundamentals .....	79
3.3.1.1 Bandwidth .....	79

---

### Navtech Seminars and GPS Supply

Ste 400, 6121 Lincolnia Rd

Alexandria VA 22312 USA

www.navtechgps.com

(703) 256-8900, (800) 628-0885, (703) 256-8988fax

3.3.1.2	Power .....	79
3.3.1.3	Filtering.....	81
3.3.1.4	Frequency translation and multiplication .....	81
3.3.1.5	Spread spectrum .....	83
3.3.1.6	Cross-correlation .....	83
3.3.1.7	Locking and tracking .....	85
3.3.2	Modern geodetic receivers.....	86
3.3.3.	Pseudorange measurement accuracy .....	87
3.3.4	Coping and antispoofing.....	89
3.3.4.1	Squaring.....	90
3.3.4.2	Code-aided squaring .....	90
3.3.4.3	Cross-correlation .....	90
3.3.4.4	Z tracking.....	90
Chapter 4: Adjustment Computations		
4.1	Elements .....	94
4.1.1	Statistical nature of surveying measurement.....	94
4.1.2	Elementary statistical concepts .....	95
4.1.3	Observational errors .....	97
4.1.4	Accuracy and precision .....	97
4.2	Stochastic and mathematical models.....	98
4.3	Propagation of mean and variance – covariance .....	102
4.4	Mixed adjustment model .....	108
4.4.1	Linearization .....	109
4.4.2	Minimization and solution.....	109
4.4.3	Cofactor matrices .....	110
4.4.4	<i>A posteriori</i> variance of unit weight.....	111
4.4.5	Iterations.....	113
4.5	Observation equation and condition equation models .....	114
4.6	Sequential solution.....	115
4.7	Weighed parameters and conditions between parameters.....	123
4.8	Minimal and inner constrain adjustments .....	130
4.9	Statistics in least-squares adjustments .....	135
4.9.1	Multivariate normal distribution .....	135
4.9.2	Distribution of $V^T PV$ .....	137
4.9.3	Testing $V^T PV$ and $\Delta V^T PV$ .....	142
4.9.4	General linear hypothesis.....	147
4.9.5	Ellipses as confidence regions .....	149
4.9.6	Properties of standard ellipses.....	155
4.9.7	Other measures of precision.....	160
4.10	Reliability .....	161
4.10.1	Redundancy numbers .....	161
4.10.2	Controlling type II error for a single blunder .....	163
4.10.3	Internal reliability.....	167
4.10.4	Absorption .....	168
4.10.5	External reliability.....	168
4.10.6	Correlated cases .....	169
4.11	Blunder detection .....	170
4.11.1	The $\tau$ test.....	171
4.11.2	Data snooping .....	173
4.11.3	Changing weights of observations.....	174

Chapter 5: Least-Squares Adjustment Examples.....	175
5.1 Introduction .....	175
5.2 Adjustment of a simple network on the mapping plane.....	178
5.3 Minimal constraint for network adjustment on the mapping .....	187
5.4 Inner constraint for network adjustment on the mapping plane .....	189
5.5 Adjustment of the complete network on the mapping plane.....	195
5.6 Adjustment of the complete network with additional information .....	198
5.7 Detecting poor network geometry: the dangerous circle .....	201
5.8 Closed traverse adjustment on the mapping plane .....	203
5.9 Open traverse adjustment on the mapping plane.....	206
5.10 Adjustment of leveling observations .....	206
5.11 Stochastic models for distances and angles .....	210
 Chapter 6: Links to Physical Observations.....	 215
6.1 Geoid .....	216
6.2 Ellipsoid of revolution.....	223
6.3 Location of the ellipsoid and reductions of observations.....	226
 Chapter 7: The Three-Dimensional Geodetic Model .....	 233
7.1 The partial derivatives .....	234
7.2 Additional remarks.....	241
7.3 An example .....	243
 Chapter 8: GPS Observables.....	 247
8.1 Pseudoranges .....	248
8.1.1 The navigation solution .....	252
8.2.1 DOP factors .....	253
8.2 Carrier phases .....	255
8.2.1 Undifferenced carrier phase observable.....	256
8.2.2 Single differences.....	259
8.2.3 Double differences .....	261
8.2.4 Triple differences .....	262
8.2.5 Delta ranges .....	263
8.3 Evaluation .....	264
8.3.1 The clock error terms .....	265
8.3.1.1 Receiver clocks.....	266
8.3.1.2 The question of simultaneity .....	266
8.3.1.3 Satellite clock corrections .....	268
8.3.1.4 Residual satellite clock error .....	270
8.3.2 Summary of undifferenced expressions.....	270
8.3.3 Singularities .....	272
8.3.4 <i>A priori</i> position errors .....	275
8.3.5 Cancellation of common mode errors.....	277
8.3.5.1 Navigation solution.....	277
8.3.5.2 Relative positioning .....	279
8.3.6 Connection to other systems .....	279
8.3.6.1 The Doppler connection.....	280
8.3.6.2 The VLBI connection .....	282
8.3.7 Selective availability .....	283

10.5.1	Carrier phase and pseudorange corrections.....	403
10.5.2	RTCM-104 standard.....	406
10.5.3	WADGPS .....	409
Chapter 11:	Network Adjustments .....	411
11.1	GPS vector networks .....	412
11.1.1	A simulated example.....	415
11.2	Combination through rotation and scaling.....	415
11.2.1	A simulated example.....	419
11.3	Accurate geoid undulations .....	421
11.3.1	The normal gravity field .....	422
11.3.2	Computing geoid undulations .....	424
11.4	Discussion of selected GPS projects.....	429
11.4.1	The Montgomery County geodetic network .....	429
11.4.2	The SLC engineering survey.....	434
11.4.3	The SSC ring.....	436
11.4.4	Orange County densification .....	440
Chapter 12:	Ellipsoidal and Conformal Mapping Models.....	451
12.1	Reductions to the ellipsoid.....	452
12.2	The ellipsoidal surface model .....	455
12.3	The conformal mapping model .....	459
12.3.1	The transverse macerator model.....	461
12.3.2	The Lambert conformal model.....	465
12.3.3	State Plane Coordinate Systems (STC).....	468
Chapter 13:	Useful Transformations.....	476
13.1	Similarity transformation for nearly aligned coordinate systems .....	476
13.2	Transforming ellipsoidal positions in a small region.....	482
Chapter 14:	Datums, Standards, and Specifications .....	486
14.1	Reference frame .....	486
14.2	Standards and specifications .....	489
14.2.1	Existing classification standards .....	490
14.2.2	The impact of GPS .....	492
14.2.3	Recommendations .....	493
14.2.3.1	Revision of the GPS Standards .....	494
14.2.3.2	Position accuracy.....	494
14.2.3.3	ACP Referencing .....	496
14.2.4	Remarks concerning specifications .....	496
14.2.5	To be continued.....	498
Appendix A:	Elements from Linear Algebra .....	
A.1	Determinants .....	500
A.2	Eigenvalues and eigenvectors .....	502
A.3	Diagonalization theorem.....	502
A.4	Quadratic forms .....	504
A.5	Inverse of a nonsingular matrix.....	506
A.6	Differentiation of quadratic forms.....	510
Appendix B:	Linearization .....	512

Appendix C: One-Dimensional Distributions.....	515
C.1 Chi-square distribution .....	515
C.2 Normal distribution .....	516
C.3 <i>t</i> distribution .....	518
C.4 <i>F</i> distribution .....	519
C.5 Distribution of selected functions.....	520
C.5.1 The sum of normal distributed variables.....	520
C.5.2 The square of standardized normal distribution .....	521
C.5.3 The sum of chi-square distributed variables.....	521
C.5.4 The sum of squares of standardized normal distributed variables .....	521
C.5.5 The sum of squares of normal distributed variables .....	521
C.6 Hypothesis tests .....	522
C.7 Goodness-of fit test .....	524
Appendix D: Rotation Matrices.....	526
Appendix E: Selected Expressions from Spherical Trigonometry.....	527
Appendix F: Sample Network .....	529
Appendix G: GLONASS .....	534
References .....	538
Abbreviations for Frequently Used References .....	549
Author Index .....	551
Subject Index .....	555
