VectorNav VN-300 Dual Antenna GPS/INS
High-Performance Embedded Navigation

**PRODUCT OVERVIEW**

VectorNav Technologies introduces the VN-300, the world’s smallest and lightest high-performance Dual Antenna GPS-Aided Inertial Navigation System (GPS/INS). Building on the architecture of the currently available VN-100 line of IMU/AHRS as well as the VN-200 line of GPS/INS, the VN-300 enables a wider range of applications through the incorporation of GPS-compass techniques. The VN-300 is ideal for applications that require a highly accurate inertial navigation solution under both static and dynamic operating conditions, especially in environments with unreliable magnetic heading and good GNSS visibility.

Incorporating the latest solid-state MEMS sensor technology, the VN-300 combines 3-axis accelerometers, gyros, magnetometers, a barometric pressure sensor, two GNSS receivers, and a low-power micro-processor into a rugged aluminum enclosure or surface mount package. The VN-300 couples measurements from the onboard GNSS receivers with measurements from the onboard inertial sensors to provide position, velocity, and attitude estimates of higher accuracies and with better dynamic performance than a standalone GPS or GNSS receiver or AHRS.
